

Broken Access Control in OWASP Juice Shop

We need to view another user's shopping basket by exploiting the broken access control vulnerability

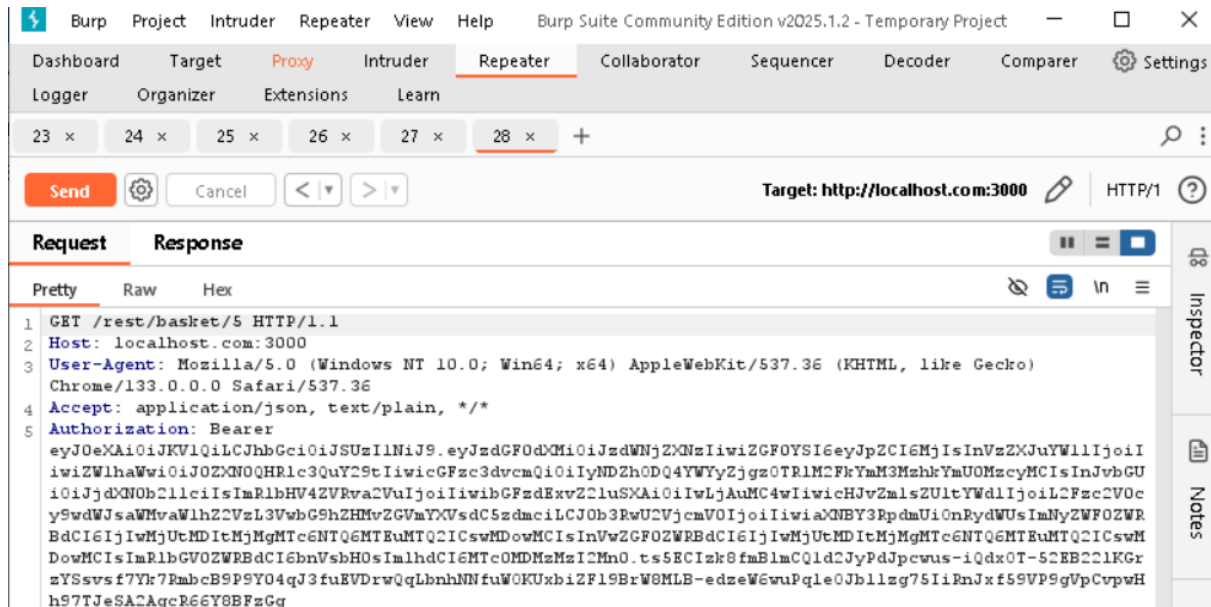

Adding an item to our user account's basket and intercepting that request using burp suite

From this we can see that our basket's id is 6

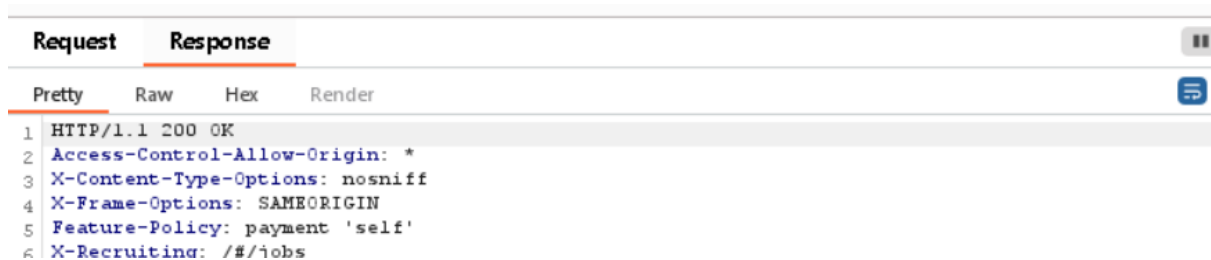

sending the request to repeater

changing the id of basket from 6 to any other number

forwarding the request to check for the response from the server

We got success response from the server

and now we are able to see the items listed in the cart of another user
